#### **DETAILED ACTION**

#### Specification

1. The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code on page 4, lines 3, 4. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

### Claim Objections

- 2. Claims 4-14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-14 not been further treated on the merits.
- 3. Claims 1-3 are examined on the merits.

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Yutani et al (U.S. 5,439,980).

With regard to claims 1 and 2, Yutani discloses a method of degenerative iodine chain transfer polymerization, where in polymer chain is produced by polymerizing, in

Application/Control Number: 10/619,991

Art Unit: 1713

the presence of a radical generating source and an iodide compound of at least one monomer M1 having a radically polymerizable unsaturated bond between a carbon atom and an iodine atom constituting a carbon-iodine bond of the iodide compound to form at least one polymer chain between the carbon atom and the iodine atom, wherein the polymerization reaction is carried out in the presence of a monomer M2 which is different from the monomer M1 and has a larger addition reactivity with a carbon radical which is generated by cleavage of the carbon-iodine bond of the iodine compound than that of the monomer M1 (abstract).

An intermediate polymer of Yutani is disclosed in Example 3, lines 40-45, wherein in the first step the MMA was polymerized in the presence of AIBN and iodine chain transfer agent, and the second step is further described in lines 46-55, wherein the iodine containing intermediate polymer of the previous step was polymerized with additional MMA in the presence of AIBN.

With regard to claim 3, the claimed limitation will be inherently met, since it is axiomatic that one who performs the steps of a process must necessarily produce all of its advantages. Mere recitation of a newly discovered property or <u>function</u> that is inherently possessed by the things or steps in the prior art does not cause a claim drawn to those things to distinguish over the prior art Leinoff v. Louis Milona & Sons, Inc. 220 USPQ 845 (CAFC 1984)

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tatyana Zalukaeva whose telephone number is (571) 272-1115. The examiner can normally be reached on 9:00 - 5:30.

Art Unit: 1713

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
